1. Introduction to NEXUS Workflow System

The NEXUS HRMS Workflow System provides a comprehensive, configurable process automation engine that governs every business process across the platform. Each module implements structured state machines with defined transitions, approval gates, and notification triggers that ensure compliance, accountability, and operational efficiency.

Workflows in NEXUS are built on a status-transition model where records move through well-defined states (e.g., Draft → Pending → Approved → Completed). Each transition is governed by role-based permissions, validation rules, and optional automated actions. The system supports single-step and multi-step approval chains, parallel approvals, and conditional routing based on business rules.

This document provides module-wise workflow specifications for all 35+ modules, cross-module end-to-end process flows, and guidance on workflow configuration and automation through the built-in rules engine.

2. Module-wise Workflows

This section details the workflow for each module in the NEXUS HRMS platform, including step-by-step process flows, status transitions, and key participants.

2.1 Super Admin Workflow

The Super Admin module governs platform-wide configuration, tenant management, and system-level operations. It provides the highest level of control for managing the multi-tenant SaaS platform.

Process Flow

- **Step 1:** Super Admin logs into the platform dashboard and views system-wide analytics.
- **Step 2:** Navigates to Tenant Management to create, modify, or deactivate tenant organizations.
- **Step 3:** Configures platform-level settings including feature toggles and subscription plans.
- **Step 4:** Reviews and manages global user roles and permission templates.
- **Step 5:** Monitors system health, audit logs, and security alerts.

- **Step 6:** Performs database maintenance tasks such as backup verification and schema migrations.
- **Step 7:** Approves or escalates critical system-level change requests.
- **Step 8:** Reviews AI module configurations and cost tracking dashboards.

Status Transitions

From State	To State	Trigger	Role
Platform Boot	Active	System startup	Super Admin
Tenant Creation	Provisioned	Tenant onboarding	Super Admin
Tenant Suspension	Suspended	Policy violation	Super Admin
Config Change	Pending Review	Critical settings change	Super Admin
Config Approved	Active	Review passed	Super Admin

Key Participants

Roles: Super Admin, System Administrator

2.2 Tenant Admin Workflow

Tenant Admin workflow manages organization-specific configuration including employee setup, policy definition, and module activation. It serves as the primary administrative interface for each tenant organization.

Process Flow

- **Step 1:** Tenant Admin accesses the organization dashboard and reviews pending items.
- **Step 2:** Configures company policies including leave rules, attendance policies, and payroll schedules.
- **Step 3:** Sets up organizational structure (departments, designations, reporting hierarchies).
- **Step 4:** Manages employee onboarding and offboarding processes at the organization level.
- **Step 5:** Reviews and approves escalation items from subordinate managers.
- **Step 6:** Configures module-specific settings for recruitment, performance, and training.
- **Step 7:** Generates and reviews organization-wide reports and analytics.

- **Step 8:** Manages integrations with third-party services and AI feature configurations.

Status Transitions

From State	To State	Trigger	Role
Org Setup	Configured	Initial configuration	Tenant Admin
Policy Draft	Active	Policy approved	Tenant Admin / HR
Employee Onboarding	In Progress	New hire initiated	HR / Tenant Admin
Module Activation	Enabled	Module turned on	Tenant Admin
Report Generation	Completed	Report delivered	Tenant Admin / Manager

Key Participants

Roles: Tenant Admin, HR Manager, System Administrator

2.3 Employee Management Workflow

The Employee Management workflow handles the complete employee lifecycle from profile creation through active employment to separation. It serves as the central registry for all workforce data.

Process Flow

- **Step 1:** HR creates a new employee record with personal and professional details.
- **Step 2:** Employee receives credentials and completes profile self-service update.
- **Step 3:** Manager reviews and approves employee profile changes.
- **Step 4:** HR updates employment terms (promotion, transfer, salary revision).
- **Step 5:** System automatically tracks probation period and triggers review notifications.
- **Step 6:** Employee submits document updates (address, bank details, emergency contacts).
- **Step 7:** HR verifies and approves document submissions.
- **Step 8:** System maintains complete audit trail of all profile changes.

Status Transitions

From State	To State	Trigger	Role
Profile Created	Active	Onboarding complete	HR
Profile Update	Pending Approval	Change submitted	Employee
Update Approved	Active	Manager/HR approved	Manager / HR
Probation End	Review Due	Probation period ended	System
Separated	Inactive	Offboarding complete	HR

Key Participants

Roles: HR, Manager, Employee, Tenant Admin

2.4 Recruitment Workflow

The Recruitment workflow manages the complete hiring pipeline from job requisition through candidate selection and offer management. It integrates with AI-powered screening and interview modules.

Process Flow

- **Step 1:** Hiring manager submits a job requisition with role details and requirements.
- **Step 2:** HR reviews and approves the requisition, creating a job posting.
- **Step 3:** Candidates apply through the career portal or are sourced by recruiters.
- **Step 4:** System performs initial screening using AI-powered resume analysis and score-based ranking.
- **Step 5:** Recruiters shortlist candidates based on AI scores and manual review.
- **Step 6:** Shortlisted candidates are scheduled for AI-powered or manual interviews.
- **Step 7:** Interview panel evaluates candidates and submits feedback and scores.
- **Step 8:** Selected candidates move to the offer stage for approval and dispatch.

Status Transitions

From State	To State	Trigger	Role
Requisition Draft	Pending Approval	Submitted by manager	Hiring Manager

Requisition Approved	Open	HR approved	HR
Application Received	Screening	Candidate applied	System / Recruiter
Screening Complete	Shortlisted / Rejected	AI + manual review	Recruiter
Interview Scheduled	In Progress	Interview date set	Recruiter
Interview Complete	Selected / Rejected	Panel decision	Interview Panel
Offer Draft	Pending Approval	Offer created	HR
Offer Approved	Sent	Authorized by management	HR / Tenant Admin

Key Participants

Roles: Hiring Manager, HR, Recruiter, Interview Panel, Tenant Admin

2.5 Offer Management Workflow

The Offer Management workflow handles the creation, approval, and tracking of job offers extended to selected candidates. It integrates with the recruitment pipeline and onboarding module.

Process Flow

- **Step 1:** HR creates an offer letter based on approved compensation structure.
- **Step 2:** Offer undergoes multi-level approval (HR Head, Finance, Tenant Admin as needed).
- **Step 3:** Approved offer is sent to the candidate via email with digital acceptance link.
- **Step 4:** Candidate reviews, negotiates, or accepts the offer.
- **Step 5:** Upon acceptance, system triggers onboarding preparation workflow.
- **Step 6:** If candidate declines, the position reverts to shortlist stage for alternate selection.
- **Step 7:** HR tracks offer status through a centralized offer dashboard.
- **Step 8:** System sends automated reminders for pending offer responses.

Status Transitions

From State	To State	Trigger	Role
------------	----------	---------	------

Offer Draft	Pending Approval	Created by HR	HR
Offer Approved	Sent	Approved by management	HR Head / Tenant Admin
Offer Sent	Pending Response	Delivered to candidate	System
Offer Accepted	Accepted	Candidate confirmed	Candidate
Offer Declined	Declined	Candidate refused	Candidate
Offer Negotiated	Revised	Counter-offer made	HR / Candidate

Key Participants

Roles: HR, HR Head, Finance, Tenant Admin, Candidate

2.6 AI Interview Workflow

The AI Interview workflow automates the interview process using the z-ai-web-dev-sdk for question generation, response evaluation, and scoring. It provides bias detection and consistent assessment standards.

Process Flow

- **Step 1:** Recruiter configures interview parameters (role, competency areas, difficulty level).
- **Step 2:** AI engine generates contextual interview questions based on job requirements.
- **Step 3:** Candidate completes the AI-driven interview with real-time interaction.
- **Step 4:** AI evaluates responses using scoring algorithms with configurable thresholds.
- **Step 5:** System generates detailed feedback including strengths and improvement areas.
- **Step 6:** Bias detection module flags any potential scoring inconsistencies.
- **Step 7:** Results are compiled into an Interview record with aiScore and aiFeedback fields.
- **Step 8:** Recruiter reviews AI assessment alongside manual evaluation for final decision.

Status Transitions

From State	To State	Trigger	Role
------------	----------	---------	------

Interview Configured	Scheduled	Parameters set	Recruiter
Interview Scheduled	In Progress	Candidate started	Candidate / AI
Interview Complete	Evaluating	Responses collected	AI System
Evaluation Complete	Scored	AI scoring done	AI System
Bias Check Complete	Verified / Flagged	Bias analysis done	AI System
Final Review	Approved / Rejected	Recruiter decision	Recruiter

Key Participants

Roles: Recruiter, AI System, HR Manager, Candidate

2.7 Onboarding Workflow

The Onboarding workflow manages the transition of new hires from offer acceptance to fully productive employees. It includes task assignment, document collection, and orientation scheduling.

Process Flow

- **Step 1:** System automatically creates onboarding record upon offer acceptance.
- **Step 2:** HR defines onboarding task checklist customized for the role and department.
- **Step 3:** New hire receives welcome email with portal credentials and document upload links.
- **Step 4:** Employee completes personal information and uploads required documents.
- **Step 5:** IT department provisions equipment, accounts, and access credentials.
- **Step 6:** HR schedules orientation sessions and department introductions.
- **Step 7:** Manager assigns initial training modules and buddy/mentor pairing.
- **Step 8:** System tracks task completion and triggers probation period start.

Status Transitions

From State	To State	Trigger	Role
Onboarding Initiated	In Progress	Offer accepted	System
Document Upload	Pending Verification	Documents submitted	Employee
Documents Verified	Verified	HR verified	HR
IT Provisioning	Completed	Accounts created	IT
Orientation Complete	Active	All tasks done	HR / Manager

Key Participants

Roles: HR, IT, Manager, New Hire, Tenant Admin

2.8 Attendance Workflow

The Attendance workflow handles daily time tracking, regularization, and compliance monitoring. It supports multiple tracking methods and integrates with the payroll module for accurate compensation.

Process Flow

- **Step 1:** Employee records check-in time through the web portal or mobile app.
- **Step 2:** System tracks active time and calculates breaks automatically.
- **Step 3:** Employee records check-out, completing the attendance record.
- **Step 4:** System flags anomalies (late arrival, early departure, missing check-out).
- **Step 5:** Employee submits regularization request for missed or incorrect entries.
- **Step 6:** Manager reviews and approves or rejects regularization requests.
- **Step 7:** HR reviews attendance compliance reports at month-end.
- **Step 8:** System feeds validated attendance data to the payroll calculation engine.

Status Transitions

From State	To State	Trigger	Role
Checked In	Present	Daily check-in	Employee

Anomaly Detected	Regularization Required	Policy violation	System
Regularization Submitted	Pending Approval	Request filed	Employee
Regularization Approved	Regularized	Manager approved	Manager
Regularization Rejected	Anomaly	Manager rejected	Manager

Key Participants

Roles: Employee, Manager, HR, System

2.9 Leave Management Workflow

The Leave Management workflow handles leave requests, approvals, balance tracking, and policy enforcement. It integrates with attendance and payroll for accurate leave deductions.

Process Flow

- **Step 1:** Employee views available leave balance and submits leave request with dates and reason.
- **Step 2:** System validates leave against policies (balance, blackout periods, concurrency rules).
- **Step 3:** Request is routed to the reporting manager for approval.
- **Step 4:** Manager approves, rejects, or requests modification to the leave request.
- **Step 5:** System updates leave balance and reflects the absence in the attendance calendar.
- **Step 6:** If leave overlaps with payroll period, deduction details are sent to payroll.
- **Step 7:** Employee can cancel approved leaves subject to policy conditions.
- **Step 8:** HR can override leave decisions and manage comp-off entries.

Status Transitions

From State	To State	Trigger	Role
Leave Requested	Pending Approval	Submitted by employee	Employee
Leave Approved	Approved	Manager approved	Manager

Leave Rejected	Rejected	Manager declined	Manager
Leave Cancelled	Cancelled	Employee/HR cancelled	Employee / HR
Leave Availed	Completed	Leave period ended	System

Key Participants

Roles: Employee, Manager, HR, Tenant Admin

2.10 Payroll Workflow

The Payroll workflow manages the complete salary processing cycle from data consolidation through disbursement. It handles statutory compliance, tax calculations, and multi-component salary structures.

Process Flow

- **Step 1:** HR initiates payroll cycle for the defined pay period.
- **Step 2:** System consolidates attendance, leave, overtime, and variable pay data.
- **Step 3:** Payroll engine calculates gross pay, deductions, taxes, and net pay per employee.
- **Step 4:** HR reviews computation results and resolves any flagged exceptions.
- **Step 5:** Finance team verifies statutory deductions (PF, ESI, TDS, Professional Tax).
- **Step 6:** Authorized approver gives final payroll approval for processing.
- **Step 7:** System generates payslips and initiates bank transfer files.
- **Step 8:** Payroll register is locked and archived with audit trail.

Status Transitions

From State	To State	Trigger	Role
Payroll Initiated	Data Collection	Cycle started	HR
Data Collection	Computation	Data consolidated	System
Computation	Review	Calculations done	System
Review	Pending Approval	HR reviewed	HR
Pending Approval	Approved	Authorized	Finance / Tenant Admin
Approved	Processed	Disbursement done	System / Finance
Processed	Locked	Archive complete	System

Key Participants

Roles: HR, Finance, Tenant Admin, System

2.11 Performance Management Workflow

The Performance Management workflow handles the complete review cycle including goal setting, self-assessment, manager evaluation, and calibration. It supports both periodic and continuous feedback models.

Process Flow

- **Step 1:** HR initiates the performance review cycle and defines timelines.
- **Step 2:** Employees set or confirm goals aligned with organizational objectives.
- **Step 3:** Employees complete self-assessment against defined competencies and goals.
- **Step 4:** Managers evaluate team members with ratings, feedback, and development plans.
- **Step 5:** Review undergoes calibration to ensure rating consistency across teams.
- **Step 6:** Final ratings are published with individualized development recommendations.
- **Step 7:** System triggers relevant workflows (promotion, salary revision, PIP).
- **Step 8:** HR compiles organization-wide performance analytics and trends.

Status Transitions

From State	To State	Trigger	Role
Review Cycle Initiated	Goal Setting	Cycle started	HR
Goal Setting	Self Assessment	Goals confirmed	Employee
Self Assessment	Manager Review	Self-assessment done	Employee
Manager Review	Calibration	Manager submitted	Manager
Calibration	Final Rating	Calibration done	HR / Leadership
Final Rating	Published	Ratings finalized	HR

Key Participants

Roles: Employee, Manager, HR, Leadership, Tenant Admin

2.12 Training & Learning Workflow

The Training workflow manages the learning lifecycle from needs identification through course delivery and impact assessment. It supports both mandatory and developmental training programs.

Process Flow

- **Step 1:** HR or manager identifies training needs through performance gaps or organizational requirements.
- **Step 2:** Training coordinator creates a course with objectives, content, and schedule.
- **Step 3:** Employees are nominated or self-enroll for available training programs.
- **Step 4:** Trainer delivers the course through in-person sessions or e-learning modules.
- **Step 5:** Participants complete assessments and provide course feedback.
- **Step 6:** System tracks completion status and issues certificates for passed participants.
- **Step 7:** Manager reviews training effectiveness and skill improvement metrics.
- **Step 8:** HR aggregates training data for compliance reporting and budget analysis.

Status Transitions

From State	To State	Trigger	Role
Training Need Identified	Course Created	Course designed	HR / Manager
Course Created	Enrollment Open	Published	Training Coordinator
Enrolled	In Progress	Training started	Employee
In Progress	Assessment	Course completed	Employee
Assessment	Passed / Failed	Evaluation done	System
Passed	Certified	Certificate issued	System

Key Participants

Roles: HR, Training Coordinator, Manager, Employee, Trainer

2.13 Separation Workflow

The Separation workflow manages the complete offboarding process from resignation submission through final settlement. It ensures compliance with notice periods, exit procedures, and asset recovery.

Process Flow

- **Step 1:** Employee submits resignation or manager initiates termination with reason.
- **Step 2:** HR reviews and acknowledges the separation request with notice period calculation.
- **Step 3:** System triggers exit task checklist across departments (IT, Finance, Admin).
- **Step 4:** Manager conducts knowledge transfer and handover planning.
- **Step 5:** Exit interview is scheduled and conducted by HR.
- **Step 6:** IT revokes system access and recovers organizational assets.
- **Step 7:** Finance processes final settlement including deductions and dues.
- **Step 8:** Employee record is updated to Separated status and archived.

Status Transitions

From State	To State	Trigger	Role
Resignation Submitted	Pending Acknowledgment	Resignation filed	Employee
Resignation Acknowledged	Notice Period	HR accepted	HR
Notice Period	Exit Processing	Notice period ending	System
Exit Processing	FNF Pending	Tasks completed	Multiple
FNF Pending	Separated	Settlement done	Finance / HR

Key Participants

Roles: Employee, Manager, HR, IT, Finance, Admin

2.14 Full & Final Settlement Workflow

The FNF (Full & Final) Settlement workflow handles the financial closure of separated employees including salary dues, recoveries, and statutory settlements.

Process Flow

- **Step 1:** System creates FNF case upon separation initiation.

- **Step 2:** HR reviews pending dues: unpaid salary, leave encashment, bonus provisions.
- **Step 3:** Finance calculates recoveries: notice period shortfall, advance adjustments, loan balances.
- **Step 4:** IT and Admin confirm asset recovery status and report outstanding items.
- **Step 5:** System computes net payable amount after all adjustments.
- **Step 6:** FNF statement is reviewed and approved by HR and Finance.
- **Step 7:** Payment is processed and FNF acknowledgment is generated.
- **Step 8:** FNF record is locked with complete audit trail for compliance.

Status Transitions

From State	To State	Trigger	Role
FNF Initiated	Dues Calculation	Case created	System
Dues Calculation	Recovery Assessment	Dues computed	HR / Finance
Recovery Assessment	Net Computation	Recoveries verified	Finance
Net Computation	Pending Approval	Amount finalized	System
Pending Approval	Approved	Authorized	HR Head / Finance
Approved	Paid	Disbursement done	Finance

Key Participants

Roles: HR, Finance, HR Head, IT, Admin

2.15 Helpdesk Workflow

The Helpdesk workflow manages internal support requests from ticket creation through resolution. It integrates with the AI Assistant for intelligent routing and self-service resolution.

Process Flow

- **Step 1:** Employee creates a support ticket with category, priority, and description.
- **Step 2:** System performs AI-powered categorization and routes to appropriate team.
- **Step 3:** Assigned agent acknowledges and accepts the ticket.

- **Step 4:** Agent investigates and provides resolution or requests additional information.
- **Step 5:** If escalation needed, ticket is escalated to higher support tier.
- **Step 6:** Employee confirms resolution and provides satisfaction rating.
- **Step 7:** System closes the ticket and updates the knowledge base.
- **Step 8:** Analytics engine processes ticket data for trend identification and SLA monitoring.

Status Transitions

From State	To State	Trigger	Role
Ticket Created	Open	Submitted by employee	Employee
Open	Assigned	Routed to agent	System / AI
Assigned	In Progress	Agent accepted	Agent
In Progress	Resolved	Solution provided	Agent
Resolved	Closed	Employee confirmed	Employee
Any State	Escalated	SLA breach/complexity	System / Agent

Key Participants

Roles: Employee, Support Agent, Helpdesk Manager, AI System

2.16 Project Management Workflow

The Project Management workflow handles project lifecycle from initiation through closure. It manages resource allocation, task tracking, and milestone monitoring.

Process Flow

- **Step 1:** Project Manager creates a project with scope, timeline, and resource requirements.
- **Step 2:** Management approves the project charter and budget allocation.
- **Step 3:** Team members are assigned and project plan is detailed with milestones.
- **Step 4:** Tasks are created, assigned, and tracked through the project dashboard.
- **Step 5:** Team members update task progress and log time against project activities.

- **Step 6:** Project Manager reviews progress against milestones and manages risks.
- **Step 7:** Project undergoes review gates at defined milestone checkpoints.
- **Step 8:** Upon completion, project is closed with final documentation and lessons learned.

Status Transitions

From State	To State	Trigger	Role
Project Draft	Pending Approval	Charter created	Project Manager
Pending Approval	Approved	Charter approved	Management
Approved	In Progress	Kickoff done	Project Manager
In Progress	On Hold / At Risk	Issue identified	Project Manager
In Progress	Completed	All milestones done	Project Manager
Completed	Closed	Documentation done	Management

Key Participants

Roles: Project Manager, Team Member, Management, Tenant Admin

2.17 Expense Management Workflow

The Expense workflow handles employee expense claims from submission through reimbursement. It enforces policy compliance, multi-level approval, and integrates with payroll for disbursement.

Process Flow

- **Step 1:** Employee submits expense claim with category, amount, and receipt attachments.
- **Step 2:** System validates claim against expense policy limits and category rules.
- **Step 3:** Reporting manager reviews and approves or requests clarification.
- **Step 4:** If amount exceeds threshold, claim routes to second-level approval (Finance/HR).
- **Step 5:** Finance team verifies expense validity and accounting code allocation.
- **Step 6:** Approved expenses are queued for reimbursement in the next payroll cycle.

- **Step 7:** System processes reimbursement through payroll or direct bank transfer.
- **Step 8:** Expense records are archived for audit and tax compliance purposes.

Status Transitions

From State	To State	Trigger	Role
Expense Submitted	Pending Approval	Claim filed	Employee
Pending Approval	Manager Approved	First level passed	Manager
Manager Approved	Finance Review	Threshold exceeded	System
Finance Review	Approved	Finance verified	Finance
Approved	Reimbursed	Payment processed	Finance / Payroll
Any State	Rejected	Policy violation	Manager / Finance

Key Participants

Roles: Employee, Manager, Finance, HR

2.18 Asset Management Workflow

The Asset Management workflow tracks organizational assets from procurement through disposal. It manages allocation, maintenance, and recovery of assets assigned to employees.

Process Flow

- **Step 1:** Admin or IT registers new assets with specifications, value, and warranty details.
- **Step 2:** Employee requests asset allocation through the self-service portal.
- **Step 3:** Manager approves asset allocation request.
- **Step 4:** Asset is issued to the employee with documented handover acknowledgment.
- **Step 5:** System tracks asset lifecycle including maintenance schedules and warranty expiry.
- **Step 6:** Employee reports asset issues or maintenance requests.
- **Step 7:** Upon separation, asset recovery is triggered as part of the exit checklist.

- **Step 8:** Retired or damaged assets undergo disposal workflow with proper documentation.

Status Transitions

From State	To State	Trigger	Role
Asset Registered	Available	Added to inventory	Admin / IT
Allocation Request	Pending Approval	Employee requested	Employee
Allocation Approved	Allocated	Manager approved	Manager
Allocated	In Use	Handover done	IT / Admin
In Use	Maintenance	Issue reported	Employee
In Use	Returned	Recovery at separation	IT / Admin
Returned	Available / Disposed	Assessment done	Admin

Key Participants

Roles: Employee, Manager, IT, Admin, HR

2.19 Travel Management Workflow

The Travel workflow manages business travel from request through reimbursement. It handles itinerary planning, advance processing, and expense settlement for employee travel.

Process Flow

- **Step 1:** Employee submits travel request with destination, dates, and purpose.
- **Step 2:** System validates against travel policy (class, budget, advance limits).
- **Step 3:** Manager approves the travel request with itinerary confirmation.
- **Step 4:** Finance processes travel advance if applicable.
- **Step 5:** Employee undertakes travel and retains all expense documentation.
- **Step 6:** Employee submits travel expense report upon return with receipts.
- **Step 7:** Manager and Finance review and approve travel expense settlement.
- **Step 8:** System reconciles advance against actual expenses and processes differential payment.

Status Transitions

From State	To State	Trigger	Role
Travel Requested	Pending Approval	Request submitted	Employee
Pending Approval	Approved	Manager approved	Manager
Approved	Advance Processed	Finance released	Finance
Travel Complete	Expense Report Due	Travel ended	System
Expense Submitted	Pending Review	Report filed	Employee
Pending Review	Settled	Approved and paid	Finance

Key Participants

Roles: Employee, Manager, Finance, Travel Coordinator

2.20 Document Management Workflow

The Document Management workflow handles organizational document creation, review, approval, and archival. It ensures document version control and compliance with retention policies.

Process Flow

- **Step 1:** Author creates a new document or revision in the document repository.
- **Step 2:** Document enters review cycle with designated reviewers.
- **Step 3:** Reviewers provide feedback and approval or request revisions.
- **Step 4:** Author incorporates feedback and resubmits for approval.
- **Step 5:** Final approved document is published to the organization.
- **Step 6:** System manages version control and access permissions.
- **Step 7:** Document reaches retention review date for archival or renewal.
- **Step 8:** Archived documents are stored per compliance requirements.

Status Transitions

From State	To State	Trigger	Role
Draft	Under Review	Submitted for review	Author
Under Review	Revision Required	Reviewer feedback	Reviewer

Revision Required	Under Review	Resubmitted	Author
Under Review	Approved	All reviewers approved	Reviewer
Approved	Published	Published to org	Author / Admin
Published	Archived	Retention period ended	System

Key Participants

Roles: Author, Reviewer, Admin, HR

2.21 Shift Management Workflow

The Shift Management workflow handles shift scheduling, rotation, and compliance for organizations with shift-based operations. It ensures optimal coverage and adherence to labor regulations.

Process Flow

- **Step 1:** Admin or HR defines shift types with timing, grace periods, and rules.
- **Step 2:** Shift schedule is created for the defined period with employee assignments.
- **Step 3:** System validates shift coverage and alerts for understaffed slots.
- **Step 4:** Employees view their assigned shifts and can request shift swaps.
- **Step 5:** Manager approves or denies shift swap requests.
- **Step 6:** System tracks actual shift adherence against scheduled shifts.
- **Step 7:** Discrepancies trigger regularization or overtime calculations.
- **Step 8:** Shift data feeds into attendance and payroll processing.

Status Transitions

From State	To State	Trigger	Role
Shift Defined	Active	Configuration complete	Admin / HR
Schedule Created	Published	Schedule finalized	HR / Manager
Swap Requested	Pending Approval	Employee requested	Employee
Swap Approved	Swapped	Manager approved	Manager
Shift Deviation	Flagged	Non-compliance detected	System

Key Participants

Roles: HR, Manager, Employee, Admin

2.22 Holiday Management Workflow

The Holiday Management workflow handles the definition and management of organizational holidays, regional holiday lists, and holiday policy compliance.

Process Flow

- **Step 1:** HR defines the holiday calendar for the year with dates and categories.
- **Step 2:** Regional or location-specific holiday lists are configured for multi-location organizations.
- **Step 3:** Holiday calendar is published and visible to all employees.
- **Step 4:** Employees can view applicable holidays based on their location and policy.
- **Step 5:** System integrates holidays with leave and attendance calculations.
- **Step 6:** HR can add or modify holidays during the year with appropriate approvals.
- **Step 7:** System adjusts payroll calculations for holidays falling in pay periods.
- **Step 8:** Year-end process archives the holiday calendar and initiates next year planning.

Status Transitions

From State	To State	Trigger	Role
Holiday List Draft	Pending Approval	HR created list	HR
Pending Approval	Published	Management approved	Tenant Admin / HR
Published	Active	Effective period	System
Modification Requested	Pending Approval	Change needed	HR
Active	Archived	Year ended	System

Key Participants

Roles: HR, Tenant Admin, Employee, System

2.23 Company Directory Workflow

The Company Directory workflow manages the organizational contact directory, ensuring accurate and accessible employee contact information across the organization.

Process Flow

- **Step 1:** Employee profiles are automatically populated from the Employee Management module.
- **Step 2:** Employees update their contact details and professional information.
- **Step 3:** HR reviews and verifies directory updates for accuracy.
- **Step 4:** Directory search and browse functionality is available to all authorized users.
- **Step 5:** Organization chart is generated from reporting hierarchy data.
- **Step 6:** Department and team views are maintained with current personnel data.
- **Step 7:** System ensures data privacy controls limit visibility of sensitive fields.
- **Step 8:** Directory data syncs with other modules requiring employee information.

Status Transitions

From State	To State	Trigger	Role
Profile Synced	Active	Auto-populated	System
Update Submitted	Pending Verification	Employee updated	Employee
Update Verified	Active	HR verified	HR

Key Participants

Roles: Employee, HR, All Authorized Users

2.24 Notifications Workflow

The Notifications workflow manages the generation, delivery, and tracking of system notifications across all modules. It supports in-app, email, and configurable notification channels.

Process Flow

- **Step 1:** Module event triggers notification generation based on configured rules.
- **Step 2:** System creates notification record with recipient, content, and priority.
- **Step 3:** In-app notification is delivered to the recipient's notification center.
- **Step 4:** Email notification is dispatched if configured for the event type.

- **Step 5:** Recipient views and acknowledges the notification.
- **Step 6:** Unread notifications trigger reminder cycles per escalation rules.
- **Step 7:** System tracks notification delivery status and read receipts.
- **Step 8:** Notification analytics are compiled for engagement and effectiveness metrics.

Status Transitions

From State	To State	Trigger	Role
Notification Generated	Delivered	Sent to recipient	System
Delivered	Read	Recipient viewed	Recipient
Read	Actioned	Recipient acted	Recipient
Delivered (Unread)	Reminder Sent	Escalation timer	System

Key Participants

Roles: System, All Users, HR Admin

2.25 Reports & Analytics Workflow

The Reports & Analytics workflow manages report generation, scheduling, and distribution across the platform. It provides data-driven insights for organizational decision-making.

Process Flow

- **Step 1:** User selects report type from the analytics dashboard or report catalog.
- **Step 2:** System validates user permissions for the requested report.
- **Step 3:** Report parameters are configured (date range, department, filters).
- **Step 4:** Report engine queries the database and generates the report with visualizations.
- **Step 5:** User reviews the report and can export to PDF, Excel, or CSV.
- **Step 6:** Scheduled reports are auto-generated and distributed per defined cadence.
- **Step 7:** Custom report requests are processed by HR or IT with appropriate data access.
- **Step 8:** Report usage and data access are logged for audit compliance.

Status Transitions

From State	To State	Trigger	Role
Report Requested	Generating	Parameters set	User
Generating	Ready	Data compiled	System
Ready	Viewed	User accessed	User
Ready	Exported	Downloaded	User
Scheduled	Auto-Generated	Schedule trigger	System

Key Participants

Roles: All Authorized Users, HR, Management, IT

2.26 AI Assistant Workflow

The AI Assistant workflow manages the intelligent chatbot interaction for employee self-service and HR query resolution using the z-ai-web-dev-sdk.

Process Flow

- **Step 1:** Employee initiates a conversation with the AI Assistant through the chat interface.
- **Step 2:** AI engine processes the query using NLP and intent classification.
- **Step 3:** System retrieves relevant knowledge from the HR knowledge base.
- **Step 4:** AI generates a contextual response or performs the requested action.
- **Step 5:** Conversation context is maintained for multi-turn dialogues.
- **Step 6:** If the query exceeds AI capability, smart escalation to human agent is triggered.
- **Step 7:** All interactions are logged in the AIChatLog model for analytics.
- **Step 8:** AI continuously learns from feedback to improve response accuracy.

Status Transitions

From State	To State	Trigger	Role
Query Received	Processing	NLP analysis	AI System
Processing	Knowledge Retrieval	Intent classified	AI System
Knowledge Retrieval	Response Generated	Data retrieved	AI System

Response Generated	Delivered	Response sent	AI System
Processing	Escalated	AI limit reached	AI System
Escalated	Human Agent Assigned	Agent picked up	Helpdesk

Key Participants

Roles: Employee, AI System, Helpdesk Agent, HR

2.27 Goals & OKR Workflow

The Goals & OKR workflow manages organizational and individual objective setting, tracking, and alignment. It ensures cascade alignment from company objectives to individual goals.

Process Flow

- **Step 1:** Leadership defines company-level OKRs for the period.
- **Step 2:** Department heads create team OKRs aligned with company objectives.
- **Step 3:** Individuals set personal goals linked to team and company OKRs.
- **Step 4:** System validates goal alignment and identifies orphaned objectives.
- **Step 5:** Employees update goal progress with key result check-ins.
- **Step 6:** Managers review progress and provide coaching feedback.
- **Step 7:** End-of-period evaluation assesses goal completion and alignment scores.
- **Step 8:** Goal outcomes feed into performance review and calibration processes.

Status Transitions

From State	To State	Trigger	Role
Goal Draft	Pending Alignment	Goal created	Employee / Manager
Pending Alignment	Active	Alignment confirmed	Manager
Active	In Progress	Progress updated	Employee
In Progress	Under Review	Period ended	System
Under Review	Completed	Evaluation done	Manager

Key Participants

Roles: Employee, Manager, Leadership, HR

2.28 Timesheet Workflow

The Timesheet workflow handles weekly/daily time tracking against projects and tasks. It ensures accurate time logging for billing, productivity analysis, and payroll integration.

Process Flow

- **Step 1:** Employee logs daily time entries against assigned projects and tasks.
- **Step 2:** System validates time entries against project allocation and working hours.
- **Step 3:** Employee submits the timesheet for the defined period (weekly/bi-weekly).
- **Step 4:** Manager reviews timesheet entries for accuracy and project validity.
- **Step 5:** Manager approves or returns the timesheet with feedback.
- **Step 6:** Approved timesheet data feeds into project costing and billing calculations.
- **Step 7:** Timesheet hours are reconciled with attendance records.
- **Step 8:** System generates productivity reports and utilization metrics.

Status Transitions

From State	To State	Trigger	Role
Time Entry	In Progress	Daily logging	Employee
Timesheet Submitted	Pending Approval	Period submitted	Employee
Pending Approval	Approved	Manager verified	Manager
Pending Approval	Returned	Corrections needed	Manager
Approved	Processed	Data integrated	System

Key Participants

Roles: Employee, Manager, Project Manager, Finance

2.29 Compliance Workflow

The Compliance workflow manages regulatory compliance tracking, document submissions, and audit preparedness across the organization.

Process Flow

- **Step 1:** Compliance officer defines applicable regulatory requirements for the organization.
- **Step 2:** System creates compliance tasks with deadlines and responsible parties.
- **Step 3:** Assigned teams gather required documentation and evidence.
- **Step 4:** Compliance officer reviews submissions for completeness and accuracy.
- **Step 5:** System tracks submission status and sends deadline reminders.
- **Step 6:** External audit findings are recorded with corrective action plans.
- **Step 7:** Corrective actions are tracked to closure with verification.
- **Step 8:** Compliance dashboard provides real-time status of all regulatory obligations.

Status Transitions

From State	To State	Trigger	Role
Compliance Defined	Tasks Created	Requirements mapped	Compliance Officer
Tasks Created	In Progress	Work started	Assigned Team
In Progress	Submitted	Evidence provided	Assigned Team
Submitted	Verified	Officer verified	Compliance Officer
Audit Finding	Corrective Action	Action plan created	Compliance Officer
Corrective Action	Closed	Verified resolved	Compliance Officer

Key Participants

Roles: Compliance Officer, HR, Management, Assigned Teams

2.30 Benefits Administration Workflow

The Benefits Administration workflow manages employee benefit plans including enrollment, changes, claims, and termination. It supports health insurance, retirement plans, and other perk programs.

Process Flow

- **Step 1:** HR defines available benefit plans with eligibility criteria and coverage details.
- **Step 2:** Employees review benefit options during open enrollment or life event windows.
- **Step 3:** Employee selects and enrolls in desired benefit plans.
- **Step 4:** System validates enrollment against eligibility rules.
- **Step 5:** HR processes enrollment with benefit providers and confirms coverage.
- **Step 6:** Employee submits benefit claims through the self-service portal.
- **Step 7:** HR or provider reviews and processes claims for reimbursement.
- **Step 8:** Benefit changes are processed upon qualifying life events or annual renewal.

Status Transitions

From State	To State	Trigger	Role
Enrollment Open	Selection	Employee choosing	Employee
Selection	Pending Validation	Submitted	Employee
Pending Validation	Enrolled	Eligibility confirmed	System / HR
Claim Submitted	Under Review	Claim filed	Employee
Under Review	Approved / Denied	Review complete	HR / Provider
Enrolled	Terminated	Separation/Change	System / HR

Key Participants

Roles: Employee, HR, Benefits Administrator, Provider

2.31 Loan & Advance Workflow

The Loan & Advance workflow manages employee loan applications, approvals, disbursement, and repayment tracking. It integrates with payroll for EMI deductions.

Process Flow

- **Step 1:** Employee submits loan or advance application with amount and purpose.

- **Step 2:** System validates eligibility based on employment tenure and policy limits.
- **Step 3:** HR reviews the application and verifies employee standing.
- **Step 4:** Finance approves the loan based on organizational policy and budget.
- **Step 5:** Loan amount is disbursed through payroll or direct transfer.
- **Step 6:** System sets up EMI deduction schedule in the payroll module.
- **Step 7:** Monthly EMI deductions are processed through payroll automatically.
- **Step 8:** Loan closure is processed upon full repayment or separation settlement.

Status Transitions

From State	To State	Trigger	Role
Application Submitted	Pending HR Review	Employee applied	Employee
Pending HR Review	Pending Finance Approval	HR verified	HR
Pending Finance Approval	Approved	Finance approved	Finance
Approved	Disbursed	Amount released	Finance
Disbursed	Active Repayment	EMI setup done	System
Active Repayment	Closed	Full repayment	System

Key Participants

Roles: Employee, HR, Finance, System

2.32 Grievance Workflow

The Grievance workflow handles employee complaints and grievances with confidentiality, fair investigation, and resolution tracking. It ensures compliance with labor law requirements.

Process Flow

- **Step 1:** Employee submits a grievance through the confidential portal with category and details.
- **Step 2:** System assigns the grievance to an appropriate investigator ensuring no conflict of interest.

- **Step 3:** Investigator reviews the grievance and conducts preliminary assessment.
- **Step 4:** Investigation includes interviews, document review, and evidence gathering.
- **Step 5:** Investigator submits findings and recommended resolution.
- **Step 6:** Management reviews and approves or modifies the resolution.
- **Step 7:** Resolution is communicated to the aggrieved employee with action plan.
- **Step 8:** Follow-up is conducted to ensure resolution effectiveness and prevent recurrence.

Status Transitions

From State	To State	Trigger	Role
Grievance Filed	Under Investigation	Assigned to investigator	System / HR
Under Investigation	Findings Submitted	Investigation complete	Investigator
Findings Submitted	Resolution Pending	Management review	Management
Resolution Pending	Resolved	Action approved	Management
Resolved	Follow-up	Monitoring effectiveness	HR
Follow-up	Closed	Confirmed resolved	HR

Key Participants

Roles: Employee, HR, Investigator, Management

2.33 Policy Management Workflow

The Policy Management workflow handles creation, review, approval, and communication of organizational policies. It ensures version control and employee acknowledgment tracking.

Process Flow

- **Step 1:** Policy owner drafts a new policy or revision with comprehensive content.
- **Step 2:** Legal and HR review the draft for compliance and consistency.
- **Step 3:** Reviewed policy is submitted for management approval.

- **Step 4:** Management approves and publishes the policy with effective date.
- **Step 5:** System notifies all affected employees of the new or updated policy.
- **Step 6:** Employees review and acknowledge receipt and understanding.
- **Step 7:** System tracks acknowledgment status and sends reminders to non-responders.
- **Step 8:** Policy version history is maintained for audit and reference purposes.

Status Transitions

From State	To State	Trigger	Role
Policy Draft	Under Review	Submitted for review	Policy Owner
Under Review	Revision Required	Feedback provided	Legal / HR
Revision Required	Under Review	Revised	Policy Owner
Under Review	Pending Approval	Review complete	Legal / HR
Pending Approval	Published	Management approved	Management
Published	Acknowledgment Tracking	Notifications sent	System

Key Participants

Roles: Policy Owner, Legal, HR, Management, All Employees

2.34 Background Verification Workflow

The Background Verification workflow manages pre-employment and periodic verification checks for employees. It coordinates with external agencies and tracks verification status.

Process Flow

- **Step 1:** HR initiates background verification for a selected candidate or employee.
- **Step 2:** System generates verification consent form for candidate signature.
- **Step 3:** Candidate provides consent and required personal information.
- **Step 4:** Verification agency conducts checks (education, employment, criminal, address).
- **Step 5:** Agency submits verification reports for each check category.
- **Step 6:** HR reviews reports and flags any discrepancies for investigation.
- **Step 7:** Discrepancies are discussed with the candidate for clarification.

- **Step 8:** Final verification status is updated in the employee record.

Status Transitions

From State	To State	Trigger	Role
BGV Initiated	Consent Pending	Request created	HR
Consent Pending	Verification In Progress	Consent received	Candidate
Verification In Progress	Reports Received	Agency submitted	Agency
Reports Received	Review Complete	HR reviewed	HR
Review Complete	Cleared / Flagged	Decision made	HR

Key Participants

Roles: HR, Candidate, Verification Agency, Management

2.35 Probation Workflow

The Probation workflow manages the probation period for new employees from onboarding through confirmation or extension. It ensures timely reviews and compliance with probation policies.

Process Flow

- **Step 1:** System sets probation period based on role and organizational policy upon onboarding.
- **Step 2:** Manager receives notification at mid-probation review checkpoint.
- **Step 3:** Manager conducts mid-probation review and provides feedback.
- **Step 4:** System triggers end-of-probation review notification before expiry.
- **Step 5:** Manager completes end-of-probation evaluation with recommendation.
- **Step 6:** HR reviews the evaluation and decides confirmation, extension, or separation.
- **Step 7:** If confirmed, employee status is updated with permanent employment terms.
- **Step 8:** If extended, new probation end date is set with specific improvement goals.

Status Transitions

From State	To State	Trigger	Role
Probation Started	Mid-Review Due	Mid-point reached	System
Mid-Review Due	Mid-Review Complete	Feedback given	Manager
Mid-Review Complete	End Review Due	End of probation	System
End Review Due	Evaluation Submitted	Manager evaluated	Manager
Evaluation Submitted	Confirmed / Extended / Separated	HR decision	HR

Key Participants

Roles: Manager, HR, Employee, System

2.36 Event Management Workflow

The Event Management workflow handles planning, coordination, and execution of organizational events. It manages invitations, RSVPs, logistics, and post-event feedback.

Process Flow

- **Step 1:** Event organizer creates an event with details, venue, date, and budget.
- **Step 2:** Management approves the event proposal and budget allocation.
- **Step 3:** System sends invitations to targeted employee groups with RSVP tracking.
- **Step 4:** Logistics team arranges venue, catering, and other requirements.
- **Step 5:** Organizer manages RSVPs and sends reminders to non-responders.
- **Step 6:** Event is conducted as per the planned schedule.
- **Step 7:** Post-event feedback is collected from attendees.
- **Step 8:** Organizer compiles event summary with attendance, costs, and feedback analysis.

Status Transitions

From State	To State	Trigger	Role
Event Proposed	Pending Approval	Organizer created	Organizer

Pending Approval	Approved	Management approved	Management
Approved	Invitations Sent	Published to employees	System
Invitations Sent	RSVP Tracking	Responses received	System
Event Conducted	Feedback Collection	Event completed	Organizer
Feedback Collection	Closed	Summary completed	Organizer

Key Participants

Roles: Event Organizer, Management, Employees, Admin

3. Cross-Module End-to-End Workflows

Cross-module workflows represent complete business processes that span multiple NEXUS modules. These end-to-end workflows ensure seamless data flow and process continuity across organizational functions.

3.1 Hire-to-Retire

The Hire-to-Retire workflow represents the complete employee lifecycle from recruitment through retirement or separation. It is the most comprehensive cross-module workflow in NEXUS, spanning over 15 modules.

- Recruitment: Job requisition → Candidate sourcing → Screening → Interview → Selection
- Offer Management: Offer creation → Approval → Dispatch → Acceptance
- Background Verification: Consent → Agency checks → Clearance
- Onboarding: Welcome → Document collection → IT provisioning → Orientation → Task completion
- Probation: Mid-review → End-review → Confirmation/Extension
- Active Employment: Attendance tracking → Leave management → Performance reviews → Training
- Career Progression: Promotions → Transfers → Salary revisions → Goal alignment
- Separation: Resignation → Notice period → Exit processing → FNF settlement → Record archival

Phase	Modules Involved	Key Status	Duration
Recruitment	Recruitment, AI Interview, Offers	Requisition → Selection	2-8 weeks
Onboarding	Onboarding, IT, Employee Mgmt	Initiated → Active	1-4 weeks
Active Employment	Attendance, Leave, Performance, Training	Active	Ongoing
Career Growth	Performance, Goals, Training	Promoted / Transferred	As needed
Separation	Separation, FNF, Asset, Helpdesk	Resigned → Separated	1-3 months

3.2 Requisition-to-Onboarding

This workflow covers the complete process from identifying a staffing need to having a new employee fully onboarded and productive.

- Hiring manager identifies staffing gap and submits job requisition with JD and budget.
- HR reviews requisition, aligns with headcount plan, and approves the position.
- Recruitment team creates job posting and initiates candidate sourcing.
- AI-powered screening ranks candidates based on resume matching and score analysis.
- Shortlisted candidates undergo AI Interview and/or manual panel interviews.
- Selection committee finalizes candidate(s) based on composite scoring.
- HR creates offer letter routed through approval chain (HR Head → Finance → Tenant Admin).
- Candidate accepts offer, triggering automatic onboarding workflow initiation.

3.3 Leave-to-Payroll

This workflow illustrates how leave data flows through the system to impact attendance records and ultimately payroll calculations.

- Employee submits leave request through the Leave Management module.
- System validates leave against available balance, blackout periods, and concurrent leaves.
- Manager approves or rejects the leave request with comments.
- Approved leave is reflected in the Attendance calendar and employee leave balance.
- During payroll data consolidation, system retrieves leave data for the pay period.
- Unpaid leaves are calculated as per-day deductions based on salary structure.
- Leave encashment for eligible leaves is added to the payroll computation.
- Final payroll reflects all leave-based adjustments in the payslip breakdown.

3.4 Performance-to-Promotion

This workflow demonstrates how performance review outcomes trigger career progression actions including promotions, salary revisions, and development plans.

- HR initiates the periodic performance review cycle with defined timelines.

- Employees complete self-assessment and goal progress documentation.
- Managers evaluate with ratings, competency assessments, and development feedback.
- Calibration sessions ensure rating consistency across teams and departments.
- Final ratings are published with performance bands (Exceeds, Meets, Below Expectations).
- High performers are identified for promotion consideration by leadership.
- Promotion proposals are submitted with compensation revision recommendations.
- Approved promotions trigger employee record updates, salary revisions, and role changes.

3.5 Travel-to-Reimbursement

This workflow covers the complete business travel process from request through expense settlement.

- Employee submits travel request with itinerary, estimated costs, and business purpose.
- Manager approves the travel request with policy compliance verification.
- Finance processes travel advance as per organizational policy limits.
- Employee undertakes the approved travel and retains all expense documentation.
- Upon return, employee submits travel expense report with categorized receipts.
- Manager reviews expense report for reasonableness and policy adherence.
- Finance verifies expense calculations and accounting allocations.
- Approved expenses are reimbursed through payroll or direct bank transfer.

3.6 Ticket-to-Resolution

This workflow covers the complete helpdesk ticket lifecycle from issue reporting through resolution and feedback.

- Employee creates a support ticket with category, priority, and detailed description.
- AI-powered classification categorizes and routes the ticket to the appropriate team.
- Assigned agent acknowledges the ticket and begins investigation.

- Agent provides resolution or requests additional information from the employee.
- If SLA is at risk, system automatically escalates to higher support tier.
- Employee verifies the resolution and provides satisfaction rating.
- Ticket is closed with resolution details added to the knowledge base.
- Analytics dashboard updates with resolution metrics for trend analysis.

4. Workflow Automation & Rules Engine

The NEXUS Workflow Automation & Rules Engine provides a configurable framework for automating business process decisions, routing, and actions without requiring code changes. It enables organizations to adapt workflows to their unique policies and compliance requirements.

4.1 Automation Capabilities

- **Conditional Routing:** Route workflow steps based on data values such as amount thresholds, department, location, or role. For example, expense claims above \$500 automatically route to Finance review.
- **Auto-Approval Rules:** Configure rules that automatically approve workflow steps meeting predefined criteria. For example, leave requests of 1 day with sufficient balance can be auto-approved.
- **Escalation Triggers:** Define time-based escalation rules that automatically escalate pending items after specified durations. For example, helpdesk tickets unresolved after 4 hours escalate to Tier 2.
- **Notification Rules:** Configure event-driven notifications to specific roles or individuals at any workflow transition point.
- **Parallel Processing:** Enable simultaneous approval steps where multiple approvers can review independently, with configurable completion criteria (any one, majority, or all).
- **Data-Driven Actions:** Trigger automated actions based on workflow data, such as sending onboarding checklists upon offer acceptance or initiating FNF upon separation confirmation.
- **Scheduled Workflow Actions:** Set up periodic workflow actions such as probation review reminders, performance cycle initiation, and compliance deadline alerts.
- **Integration Triggers:** Configure webhooks and API calls at workflow transition points for integration with external systems.

4.2 Rules Engine Architecture

The Rules Engine operates on an event-condition-action (ECA) model. When a workflow event occurs (e.g., status change), the engine evaluates all applicable rules against the current context and executes matching actions in priority order.

Component	Description	Example
Event Trigger	Workflow state change or data update	Leave request status changed to Approved
Condition Evaluator	Rule-based logic evaluation	If leave days > 3 AND department = "Engineering"
Action Executor	Performs the determined action	Route to Department Head for secondary approval
Priority Engine	Resolves conflicting rules by priority	Higher priority rules override lower ones
Audit Logger	Records all rule evaluations and actions	Rule X triggered, condition met, action Y executed

4.3 Rule Configuration Example

Below is an example of configuring an expense approval rule in the Rules Engine:

- **Rule Name:** High-Value Expense Approval
- **Event:** Expense claim submitted
- **Condition:** Claim amount > \$1,000 OR category = "International Travel"
- **Action:** Route to Finance Manager → CFO (two-level approval)
- **Priority:** High (overrides standard manager-only approval)
- **SLA:** Finance Manager must respond within 24 hours; CFO within 48 hours
- **Escalation:** If no response within SLA, auto-escalate to Tenant Admin
- **Notification:** Notify claimant at each approval step with status update

5. Workflow Configuration Guide

This section provides practical guidance for configuring and customizing workflows in NEXUS HRMS. It covers the configuration interface, best practices, and common customization scenarios.

5.1 Configuration Interface

The Workflow Configuration interface is accessible to Tenant Admins through Settings → Workflow Configuration. The interface provides a visual workflow editor with drag-and-drop capability for defining process flows, status transitions, and approval chains.

- **Visual Workflow Builder:** Drag-and-drop interface for creating and modifying workflow diagrams with states, transitions, and conditions.
- **Status Management:** Define custom statuses with color coding, SLAs, and notification triggers for each workflow.
- **Approval Chain Editor:** Configure multi-level approval chains with parallel or sequential approval steps.
- **Rule Builder:** Visual rule builder for creating conditional logic without coding, supporting AND/OR conditions.
- **Notification Templates:** Customizable notification templates for each workflow transition with variable substitution.
- **Preview & Test:** Simulate workflow execution with test data before deploying changes to production.
- **Version Control:** Track workflow configuration changes with version history and rollback capability.
- **Import/Export:** Export workflow configurations as JSON for backup and import across tenants.

5.2 Best Practices

- **Start with Standard Workflows:** Use the predefined workflow templates as a starting point and customize incrementally rather than building from scratch.
- **Define Clear SLAs:** Set realistic SLAs for each approval step to ensure timely processing and automatic escalation when needed.
- **Limit Approval Levels:** Keep approval chains to 2-3 levels maximum. Excessive levels create bottlenecks and delay processing.

- **Use Conditional Routing:** Leverage conditional rules to simplify workflows rather than creating separate workflows for each scenario.
- **Test Thoroughly:** Always test workflow changes in the preview environment before deploying. Verify all transition paths and edge cases.
- **Document Customizations:** Maintain documentation for all custom workflow configurations, including the business rationale and approval matrix.
- **Review Periodically:** Conduct quarterly reviews of workflow configurations to identify bottlenecks, unused paths, and optimization opportunities.
- **Monitor Analytics:** Use workflow analytics to track processing times, approval rates, and escalation frequency for continuous improvement.

5.3 Common Customization Scenarios

Scenario	Configuration	Modules Affected
Multi-location leave policy	Define location-specific leave rules and approval chains	Leave, Attendance, Payroll
Expense threshold-based approval	Set amount-based routing rules with tiered approval	Expense, Finance
Probation auto-confirmation	Configure auto-confirmation if no negative feedback received	Probation, Employee Mgmt
Shift-based attendance rules	Define grace periods and policies per shift type	Shift, Attendance, Payroll
Department-specific recruitment	Route requisitions through department heads before HR	Recruitment, Offers
AI interview scoring thresholds	Configure pass/fail thresholds with automatic shortlisting	AI Interview, Recruitment

5.4 Troubleshooting Configuration Issues

- **Workflow Stuck:** Check if all required approval steps have assigned approvers. Verify that notification rules are active and SLA timers are configured. Use the Workflow Inspector to trace the exact point of blockage.
- **Incorrect Routing:** Review conditional rule logic and verify that data fields used in conditions are populated correctly. Check rule priority order as higher-priority rules may override expected routing.
- **Missing Notifications:** Verify notification template configuration and recipient mapping. Check that the notification service is running and email configurations are correct.

- **Approval Bypass:** Review auto-approval rules to ensure they are not overly broad. Check conditional logic for unintended matches that trigger auto-approval.
- **Performance Issues:** Complex workflows with many rules and transitions can impact processing time. Consider simplifying rule conditions and reducing the number of concurrent workflow evaluations.
